

# Shelf life performance

Test packing is a powerful tool to predict the shelf life of (packaged) foods and to evaluate shelf life performance of packaging concepts. We have a vast amount of knowledge & experience in all aspects of packaging technology and are experts in food technology, materials science and corrosion technology.

We offer

- test pack facilities such as filing and seaming, processing and electrochemical testing
- flexibility in heat processing possibilities
- extensive temperature-conditioned storage facilities
- safe storage for flammable packs
- sophisticated electrochemical support.
